

Genuine Forkster Attachment

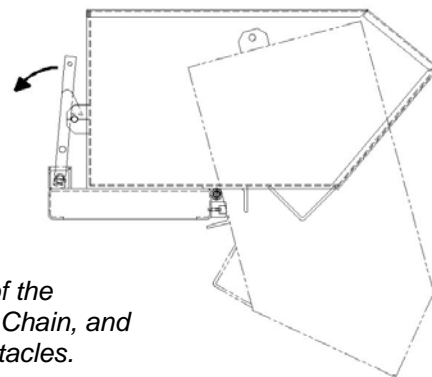

Dump Box

The Dump Box is a 1 cubic yard, general purpose material handler. It is intended to reduce time transporting material 1 bucket at a time, and keep a cleaner jobsite.

To activate the dumping mechanism, release the dump lock via either the handle or the attached Dumping Cable. Always be certain the path of the dumping process is clear.

The Dump Box attaches to the Forkster using any of the Genuine Forkster Forks. Always secure the Safety Chain, and keep the extended Dumping Cable clear of any obstacles.

The Dump Box is intended for use on level ground in non-hazardous locations. Operators should be thoroughly familiar with its operation before attempting actual use. When in use, observe the following precautions.

1. Insure that the load does not exceed rated capacity for the Dump Box.
2. Insure that the Safety Chain is locked and that the load is attached in a properly balanced manner. Forks should be inserted completely into Dump Box.
3. Check for overhead obstructions before and during the lifting operation.
4. Transport the load at the lowest height and speed feasible.
5. Do not allow the load to be suspended over any part of the human body.
6. Adjust height cautiously to provide a slow, smooth rate of load movement.
